

PROFESSIONAL SUMMARY

AI Automation and Full-Stack Developer experienced in building LLM-powered workflows, REST API integrations, and database-backed web applications. Skilled in React, Node.js, Python, MySQL, and n8n, with practical experience developing booking, outreach, content-generation, and workflow-automation systems.

SKILLS

Programming Languages	Python, JavaScript, SQL, HTML5, CSS3
Frontend:	React, Vite, Responsive Web Design
Backend and APIs:	Node.js, Express.js, REST APIs, Webhooks, Custom API Integrations
AI and Automation:	n8n, LLM API Integration, Agentic AI, Prompt Engineering, Workflow Automation
Databases:	MySQL, PostgreSQL, Airtable, Supabase, Neon PostgreSQL
Developer Tools:	Git, GitHub, Postman, VS Code, Chrome DevTools, Vercel, Hostinger, Figma

EXPERIENCE

Web Development Intern

June 2026 – Present

ABP Network

Noida, Sector 125, U.P.

- Developed an AI-powered content generation system at ABP Network that produces copyright-free, 16–20-second promotional videos from user-provided topics.
- Implemented a human-in-the-loop review process to validate content quality, accuracy, brand safety, and publishing suitability before approval.
- Built configurable scheduling workflows that allow users to select the number and frequency of videos to be generated automatically.
- Integrated social media publishing workflows to distribute approved videos across selected platforms while maintaining a generation cost below Rs20 per video.

AI Automation and Web Development Intern

Oct 2025 – Present

Ibra Digital Branding Services

Noida, Sector 62, U.P.

- Developed TheHotspot, a React and Python-based cold outreach platform that helps marketing companies generate leads, identify potential clients, run outreach campaigns, and connect with businesses.
- Integrated Gmail SMTP to send cold emails, schedule outreach messages, automate follow-ups, and manage communication with leads and prospective clients.
- Built an integrated email inbox for viewing recent emails, replies, and follow-up conversations directly within the platform, with MySQL used for storing contacts, campaigns, messages, and outreach activity.
- Implemented company analysis and daily task-management features that generate actionable tasks, track work completed during the day, display overall progress, and highlight pending outreach activities.

Tech Stack : React, Python, MySQL, Gmail SMTP, REST APIs, Email Automation

PROJECTS

IbraFarms Web App

- Developed a full-stack farmhouse booking platform using React, Vite, Node.js, Express.js, MySQL, and REST APIs, delivering responsive and cross-device-compatible user interfaces.
- Implemented secure authentication, role-based dashboards, property listings, availability management, booking creation, customer records, and real-time database operations.

- Built booking and payment workflows including payment-status tracking, security-deposit verification, downloadable invoices, booking confirmations, and administrative approval processes.
- Diagnosed and resolved frontend, backend, API, CORS, database connectivity, validation, and responsive-design issues to improve application reliability and usability.

Blog Report Generator Agent

- Developed an end-to-end n8n workflow that accepts YouTube video URLs, extracts transcripts, and converts them into structured, SEO-focused blog reports.
- Integrated the YouTube Transcript API and LLM APIs within n8n to retrieve video content, analyse transcripts, remove irrelevant information, and humanise the generated writing.
- Designed prompt-based automation to organise reports into structured sections, including titles, headings, summaries, keywords, and readable blog content.
- Automated the complete workflow from URL submission and transcript extraction to content refinement, report generation, and database storage using n8n nodes, APIs, and webhooks.

Social Media Content Automation

- Built an n8n-based automation that collects source content, processes it using LLM APIs, and generates platform-specific social media posts.
- Created reusable prompt workflows in n8n to customise captions, tone, formatting, hashtags, and content length according to each social media platform.
- Integrated REST APIs, webhooks, database services, and social media APIs to retrieve source data, generate content, and store the final outputs.
- Automated the complete content-processing workflow from source collection and AI refinement to approval-ready post generation and publishing preparation, reducing repetitive manual work.

EDUCATION

Bachelor of Technology in Computer Science and Engineering,
IILM University, Greater Noida

Aug 2024 – May 2028
